Business Values

Nuclear University
NU-SOP-BV-01

2011 Rev. 0

Nuclear University Business Values reflect the ethics, goals and standards that we practice every day. We strive to achieve each of these values in every business transaction and employee interaction.

Our Business Values

- Always be passionately committed to the success of our clients
- Foster a balanced life for our employees
- Create sustainable company culture that makes people want to work with us
- Build our business on a solid foundation, fostering loyalty among our customers and our employees alike.
- Contribute to the community in meaningful ways.
- Ensure every business decision avoids harm to the environment.
- Grow our business profitably, and create long-term value
- Be accountable for our actions
- Respect the diverse mix of race, religion, and abilities of other our employees and clients
- Aggressively assess, find, and fix all areas of our business that challenge our values

Nuclear University(the “Company”) has established these Values to serve as common goals amongst its Board of Directors, Management, and Employees.

This affirmation of ideals and principles summarizes the responsibilities of the Company and the surrounding institutional framework that has been constructed to fulfill our vision.

We formally affirm the following:

Our belief that innovation and vision must be the guiding ideas of our development – requiring national policies as well as private development that meet the needs and aspirations of the present generation without compromising the opportunity of future generations;

Our conviction that our way of doing business offers a unique alternative to the governmental sector whose future success depends on the availability of sound and innovative resources;

Our intention to cooperate, in a spirit of partnership, with those companies engaged in the research, development and operation of technologies that yield America a competitive advantage without adversely effecting the environment;

Our determination to promote, as a matter of principle and urgent public need, an ongoing debate on energy resources that focuses citizens and institutions alike on facts and science;

Our strongly held certainty that many industries as well as government have under leveraged technology in key areas, and ensure that neither move forward without offering our expertise.

I affirm that I have read and understand the business values fostered by Nuclear University . Additionally, I agree to ask for assistance from the Nuclear University management team if I believe these values are ever being challenged by me or my co-workers.
